

## Cyber Security Awareness

### Course Overview

In October 2015, the Office for National Statistics reported that 2.5 million incidents of cyber crime were reported in a year. These attacks were not simply targeting large, multinational corporations. These attacks were also targeted at small to medium enterprises as well as individuals. This worrying data shows the risk of all businesses to being a target to cybercrime. Impacts of a successful attack include loss of profits, loss of customer trust and reputational damage. It could even result in regulatory or legal action.

This module provides a one-stop shop for cybersecurity awareness for all levels of an organisation. The module outlines threats facing firms and how best to prevent the materialising of an attack. The module also provides an overview of the obligations of financial services professionals in order to comply with local laws and regulations.

### Course Content:

- What is cybercrime?
- Data and the Law
- Impact of cybercrime and prevention methods
- Monitoring and reporting

### Quick Info:

**Duration / CPD:** 1 Hour

**Suitable for:** All staff

**Validity:** Licences are valid for one year after the date of issue

### Cost:

1–10 licences = £60  
11–24 licences = £55  
25–49 licences = £50  
50–74 licences = £45  
75–99 licences = £40

### Key Features:

- Includes key information for regulated financial services businesses in Jersey
- Content updated regularly
- A certificate will be produced upon completion
- Progress can be saved and returned to when convenient
- The LMS allows for simple and effective auditability of user progress
- Cost-effective
